1 Introduction

1.1 Background

The Detailed Test Plan (DTP) contains a detailed and executable strategy for conducting automated testing of the Tamalak Real Estate Application using Katalon Studio v10.4.3. It defines the testing objectives, approach, test environment, test conditions, and the test plan for the complete testing cycle.

1.2 Testing Objectives

- Verify all functional requirements are implemented correctly across 9 modules
- Achieve minimum 80% test pass rate
- Identify and document all critical and high-priority defects
- Validate user authentication and authorization mechanisms
- Ensure system reliability and stability

1.3 Document Audience

Name	Email/ Telephone	Organization
Ahmed ElSherif Salah Elabd	01100610127	MSA
Noureldin Tarek	01066107757	MSA

Table 2: Definitions and Acronyms

Acronym	Definition
DTP	Detailed Test Plan
TC	Test Case
TS	Test Suite
UAT	User Acceptance Testing
API	Application Programming Interface

2 Testable Items

2.1 In Scope

This test activity focuses on the following:

2.1.1 Functional Scope

Table 3: Functional

Functional Area	Functional Sub Area	Description
TS_AUTH	Authentication	Login, Registration, Password Reset, Session Management (35 test cases)
TS_ADMIN	Admin Management	User, Property, Review, Filter Management (32 test cases)
TS_AGENT	Agent Management	Create, View, Update, Delete Agent (9 test cases)
TS_PROFILE	Profile Management	View, Edit Profile (8 test cases)
TS_NAV	Navigation	Main Menu, User Menu Navigation (12 test cases)
TS_NOTIF	Notifications	View, Manage, Trigger Notifications (7 test cases)
TS_PROP	Property Service	Create, Browse, Search, Filter Properties (13 test cases)
TS_DEVPROP	Developer Properties	Project and Property Management (17 test cases)
TS_REVIEW	Review Management	Create, View, Delete Reviews (10 test cases)

2.1.2 Non Functional Scope

Table 4: Non Functional

Non Functional Requirement	Description
NFR-001	Security - XSS Prevention, Password Masking
NFR-002	Usability - UI Navigation and User Experience

2.2 Out of Scope

Item	Description
------	-------------

1	Performance/Load Testing
2	Mobile Application Testing
3	Third-party Payment Integration Testing

2.3 Testing Exclusions

Database migration testing and penetration testing are excluded from this test plan.

3 Detailed Test Approach

All testing conducted for the Tamalak Real Estate Application complies with the Test Strategy Document. This Detailed Test Plan has been created to define the test activities for Release 1.0.

The Tamalak Real Estate Application will be tested using the following approach:

Automation-First Testing - All 142 test cases are automated using Katalon Studio v10.4.3 with data-driven and keyword-driven hybrid framework.

Smoke Testing - Execute critical path tests across all 9 modules to verify basic functionality before complete testing.

Complete Testing - Execute all test cases covering functional requirements for Authentication, Admin, Agent, Profile, Navigation, Notification, Property Service, Developer Properties, and Review modules.

Defect Logging - All failed test cases are logged with defect ID, severity, priority, and assigned to developers for resolution.

Test Reporting - Automated HTML and CSV reports generated by Katalon Studio for each test suite execution.

3.1 Naming Conventions for Function Groups and Functions

Test Case ID format: TC_[MODULE]_[NUMBER]_[Description]

Example: TC_AUTH_001_Login_Valid_Credentials

3.2 Test Case Design

Test cases are designed based on the Test Scenarios Document containing 43 test scenarios mapped to 142 automated test cases.

Module Concerns and Test Focus:

Module	Concern Area	Test Focus
Authentication	Security, Session	Valid/invalid credentials, password reset, session persistence
Admin	Data integrity	CRUD operations,

		validation, access control
Agent	Data display	Profile creation, viewing, updates
Property Service	Search/Filter	Listing, search criteria, filter combinations
Developer Properties	Access control	Developer-only features, project management
Review	Rating system	Star ratings (1-5), create/delete reviews, validation
Notification	Event triggers	View, mark read, delete, event-triggered alerts
Navigation	UI/UX Menu	links, page routing, user dropdown

Test Coverage Matrix: Each test scenario is traced to test cases ensuring 100% requirement coverage. The Requirement Traceability Matrix links functional requirements to test cases.

Regression Test Approach: Based on defect analysis, Authentication (8 failures) and Developer Properties (5 failures) modules require priority regression testing. When defects are fixed, related test cases will be re-executed to verify fixes and ensure no new defects are introduced.

3.3 Test Scheduling

Test Suite	Function to be Executed	Date
Smoke Collection	All 9 modules - critical paths	January 9, 2026
Complete Collection	All 142 test cases	January 9, 2026
TS_Admin_Complete	32 Admin test cases	January 9, 2026
TS_Agent_Complete	9 Agent test cases	January 9, 2026
TS_Authentication_Complete	35 Auth test cases	January 9, 2026

TS_DeveloperProperties_Complete	17 DevProp test cases	January 9, 2026
TS_Navigation_Complete	12 Navigation test cases	January 9, 2026
TS_Notification_Complete	7 Notification test cases	January 9, 2026
TS_Profile_Complete	8 Profile test cases	January 9, 2026
TS_PropertyService_Complete	13 Property test cases	January 9, 2026
TS_Review_Complete	10 Review test cases	January 9, 2026

Table 6:

Test Run #	Function to be Executed	Cycle Date
Test Run 1 (Smoke)	Authentication Login, Admin Access, Navigation Menu, Property Browse	January 9, 2026 (18:02)
Test Run 2 (Complete)	Authentication (35 TC), Admin (32 TC), Agent (9 TC)	January 9, 2026 (18:26)
Test Run 3 (Complete)	Profile (8 TC), Navigation (12 TC), Notification (7 TC)	January 9, 2026 (18:26)
Test Run 4 (Complete)	Property Service (13 TC), Developer Properties (17 TC), Review (10 TC)	January 9, 2026 (18:26)

3.4 Data Build

Test Data Strategy: Test data is prepared using Katalon Studio's built-in test data management with predefined data files for each module.

Data Preparation Approach:

Module	Test Data	Source
Authentication	User credentials (valid/invalid emails, passwords)	Katalon Test Data files
Admin	Admin user account, sample users,	Pre-created in test

	properties, filters	environment
Agent	Agent profiles, contact details	Generated during test execution
Profile	User profile data (names, phone numbers)	Katalon Test Data files
Navigation	N/A – UI navigation testing	No data required
Notification	Trigger events (reviews, properties, projects)	Created during test execution
Property Service	Property listings (title, price, location, images)	Katalon Test Data files
Developer Properties	Developer account, project details	Pre-created + generated
Review	Reviewer names, ratings (1–5), review text	Katalon Test Data files

Process Steps:

- Define test data requirements for each test case
- Create test data files in Katalon Studio
- Load test data into test environment before execution
- Clean up/reset test data after each test cycle.

3.5 Results/Sign-Off

3.5.1 Suspension/Resumption Criteria

Testing will halt when:

- A critical problem is identified requiring substantial re-testing
- Test environment is not available
- Major specification modifications are required

3.5.2 Pass/Fail Criteria

Table 7: Entry and Exit criteria of testing level

Testing Level	Entry Criteria	Exit Criteria
Smoke Testing	Test environment available, automation scripts ready	All critical paths pass, no blockers

Complete Testing	Smoke test passed, all test cases ready	100% execution, 80%+ pass rate, all critical defects documented
------------------	---	---

Test Cycle Level:

Minimum 80% test pass rate required for test cycle completion

All test cases must be executed (100% execution coverage)

Test execution results documented with pass/fail status

Release Level:

Overall pass rate must meet or exceed 80% threshold

Critical (P0) defects: 0% allowed - All must be fixed before production release

High (P1) defects: Maximum 5% can migrate to production with documented workarounds and business approval

Medium (P2) defects: Maximum 15% can migrate to production with business sign-off

Low (P3) defects: Can migrate to production with documented known issues list

Current Test Cycle Status:

Pass Rate: 84.51% (Meets 80% requirement)

Execution: 100% (142/142 test cases)

Critical Defects: 0

High Defects: 9 open (6.34% - Exceeds 5% threshold)

4 Test Conditions

4.1 TS_AUTH - Authentication

Testing will demonstrate: Login functionality, Registration process, Password reset flow, Session management

4.2 TS_ADMIN - Admin Management

Testing will demonstrate: User management, Property management, Review management, Filter management, Access control

4.3 TS_AGENT - Agent Management

Testing will demonstrate: Agent profile creation, viewing, updating, and deletion

4.4 TS_PROFILE - Profile Management

Testing will demonstrate: View profile, Edit profile details, Profile validation

4.5 TS_NAV - Navigation

Testing will demonstrate: Main navigation menu, User menu navigation, Authentication navigation

4.6 TS_NOTIF - Notifications

Testing will demonstrate: View notifications, Manage notifications, Event-triggered notifications

4.7 TS_PROP - Property Service

Testing will demonstrate: Create property, Browse properties, Search properties, Filter properties

4.8 TS_DEVPROP - Developer Properties

Testing will demonstrate: Create/manage projects, Add properties to projects, Access control

4.9 TS_REVIEW - Review Management

Testing will demonstrate: Create reviews with ratings, View reviews, Delete reviews, Review validation

5 Test Environments

5.1 Client Side Infrastructure

- Operating System: Windows
- Browsers: Chrome, Firefox, Edge

5.2 Host/Server Side Infrastructure

- Tamalak Real Estate Web Application Server
- Database Server

5.3 Middleware

- Katalon Studio v10.4.3 - Test automation engine

5.4 Test Data preparation

Predefined test data sets for each module stored in Katalon test data files.

6 Test Schedule

Test Suite	Function to be Executed	Date
Smoke Collection	All 9 modules - critical paths	January 9, 2026
Complete Collection	All 142 test cases	January 9, 2026
TS_Admin_Complete	32 Admin test cases	January 9, 2026
TS_Agent_Complete	9 Agent test cases	January 9, 2026
TS_Authentication_Complete	35 Auth test cases	January 9, 2026
TS_DeveloperProperties_Complete	17 DevProp test cases	January 9, 2026
TS_Navigation_Complete	12 Navigation test cases	January 9, 2026
TS_Notification_Complete	7 Notification test cases	January 9, 2026
TS_Profile_Complete	8 Profile test cases	January 9, 2026
TS_PropertyService_Complete	13 Property test cases	January 9, 2026
TS_Review_Complete	10 Review test cases	January 9, 2026

Appendix A - System Schematic/s

Metric	Value
Total Test Cases	142
Executed	142 (100%)
Passed	120 (84.51%)
Failed	22 (15.49%)
Total Defects	22
